Remediation System designed by SESCO Engineers

Cutting Edge Expertise

SESCO has expertise in Toxicology and Vapor Intrusion issues that cut across all state boundaries. The scientific information in these fields change rapidly and can have a great impact on your property. SESCO is continually researching these dynamic topics and educating our staff in order to maintain our cutting-edge proficiency.

Cost-Saving Approach

Our team-based approach allows us to develop a model to help establish the goals and implement the actions necessary to complete each project. SESCO's approach to a project is very similar to the United State's Environmental Protection Agency's Triad Approach. It utilizes systematic planning, dynamic work strategies and real-time measurement technologies for quicker delineation and clean-up at sites.

State-of-the-Art Technology

SESCO utilizes state-of-the art technology and equipment in order to complete projects in a more cost-effective and timely manner.

Real Estate Transaction Expertise

Many parties involved in a Real Estate transaction may be uncomfortable with environmental liability. SESCO's approach creates comfort by providing language for access agreements as well as indemnification that satisfies both sides of the transaction. In the end, more properties are redeveloped and less are neglected.

Funding Solutions

SESCO's consulting practice and experience includes funding environmental investigations and remediation. The various funding solutions include historical insurance recovery of Comprehensive General Liability (CGL) policies, Excess Liability Trust Fund (ELTF), grants and low-interest loans assistance.
